

NauticPlayer Pro

macOS Installation & Gatekeeper Bypass Guide

01

Open the downloaded **.dmg** file and drag the **NauticPlayer** app into your Applications folder.

02

Navigate to your Applications folder. **Do NOT double-click** the app to open it the first time.

03

Instead, **Right-Click** (or Control+Click) on the NauticPlayer icon.

04

Select "**Open**" from the context menu. A warning dialogue will appear. Click "**Open**" again to bypass the security block.

Why is this necessary?

Because NauticPlayer is an independent audio tool, macOS shows this warning for apps not signed through Apple's developer subscription. This right-click process is only required once. After this, you can open the app normally.
